

LINDER
Since 1951

Production out of 100% r-PET-bottles.*

Sustainable and environmentally friendly. LINDER PET strapping.

LINDER goes GREEN.

Our PET strapping is made **exclusively from recycled PET** bottles.* We buy more than **200 million PET bottles** every year from all over the world. Through this process and without tapping into oil reserves, we **save 17.500 tons of CO₂** emissions annually. Projected on the LINDER annual production the saving corresponds to the same quantity of CO₂, that a **1.750 ha** forest in Germany would filter annually from the air - that is a surface area of approx. **2.450 football fields** corresponding to a forest with **3 million trees**.

And with our **LINDER Closed Industry Loop**, we completely recycle our production waste and process it by agglomeration into new PET granulate. This way we ensure an internal cycle and save valuable resources. Sustainable and environmentally friendly. LINDER PET strapping.
